IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant:	Thomas J. Pavela	Examiner:	Ted T. Vo
Serial No.:	To be assigned	Group Art Unit:	2122
Filed:	September 19, 2001	Docket:	ST9-98-107US2
Title:	SYSTEM AND METHOD FOR DEVELOPING TEST CASES USING A TEST OBJECT LIBRARY		

CERTIFICATE OF MAILING UNDER 37 CFR 1.10
'Express Mail' mailing label number: EL815953376US
Date of Deposit: September 19, 2001
I hereby certify that this paper or fee is being deposited with the United States Postal Service 'Express Mail Post Office To Addressee' service under 37 CFR 1.10 and is addressed to the Commissioner for Patents, Washington, D C. 20231.

By: Isabell Ogata

SUBMISSION OF FORMAL DRAWING

Commissioner for Patents
Washington, D.C. 20231

Dear Sir:

Submitted herewith are 40 sheets of Formal Drawings for the above-identified patent application.

Respectfully submitted,

Thomas J. Pavela

By his attorneys

FIG. 7

SMQA0 1 -9 1 IMS/CQS, NON-RESPONSE MODE TRANS

Objectives

The purpose of this test is to validate that transactions can be processed on the Shared Message Queue. This test case will queue up non-response mode transactions on the queue and process them.

Scenario

1. Start up a 1-way SYSPLEX with 1 Coupling Facility
2. Initialize the RECONS and Load the DJK Data Base share level 3
3. Start IRLM 2.1
4. Cold start 1 IMS/CQS.
5. Submit 1000 non-response mode transactions
6. Start application program
7. Submit another 500 non-response mode transactions
8. Shutdown IMS after work is processed

Procedure

1. Call Hpcs_entry using configuration 30 and ARM= NO and ARCDEFLT= YES and RECVTAM= YES
2. Call Hpcs_load_databases which will:
   a. Define the shared RECON data sets
   b. Run the load database job(s) to load database(s) DJK and register the data bases as share level -3
3. Call Hpcs_Start_IRLMs_21 which will:
   a. Start IRLM 2.1 on all CECS with a lock structure of LT01
4. Call Start_IMS_on_all_systems which will:
   a. Run HPC$SPEC MODEL to update the VSPEC member on all CECs with (CFNAMES,CFIRLM=LT01,CFVSAM=,CFOSAM=OSAMSESXI)
   b. Run IMS%CSA% MVSPROC to bring up IMS TM/DB region on all CECs with CQS using VCATSHR.
   c. After DFS810A message is displayed, issue "/NRE CHKPT 0 FORMAT ALL." Wait for cold start to complete.
      1) Issue IMS command "/STOP DB DBHDOJ01"
      2) Issue IMS command "/STOP DB DBHDOK01"
      3) Issue IMS command "/START DB DBHDOJ01 ACCESS=UP"
      4) Issue IMS command "/START DB DBHDOK01 ACCESS=UP"

FIG. 8A

5. Call Start_Transaction_Scenario_1 which will:
    a. Submit 1000 non-response mode transactions (HPCSTCL1) on all CECs
    b. Issue the IMS / START PROGRAM HPCM00 command on all CECs
    c. Wait for all Scenario 1 transactions to be processed, then verify the transaction counter is correct.
6. Call Start_Transaction_Scenario_ 1 which will:
    a. Submit 500 non-response mode transactions (HPCSTCL1) on all CECs
    b. Issue the IMS / START PROGRAM HPCM00 command on all CECs
    c. Wait for all Scenario 1 transactions to be processed, then verify the transaction counter is correct.
7. Call Stop_all_IMSs which will:
    a. Issue a "/CHE FREEZE" to bring down the IMS control region on all CECs
    b. When IMS control region on all CECs completes, verify all condition codes to be zero.
    c. In Shared Queues configurations when CQS region on all CECs completes, verify all condition codes to be zero.
8. Call Hpcs_Exit routine

Verification

1. Testcase is self-verifying.

System Configuration

- This test case uses configuration 30.
